

# ALL-PURPOSE SEEDERS

## The seeder that does it all.

While seeding into a freshly prepared site, the front angling rollers help cut through the top crust, kicking up a light amount of soil, making sure the ground is soft. The seed is then dropped and compressed by the rear roller. Establishing this initial seed to soil contact is essential in achieving a high rate of germination.

### OVERSEEDING OR NEW SEEDING

The All-Purpose Seeder is ground driven with no driveline and related drivetrain components to maintain. By adjusting the front two rollers, you can control how aggressive you want to be in the area you are seeding or overseeding.
